

❖ Magic behind my Cute Github Portfolio

My portfolio uses "Dynamic typing" README" concept discovered by "Jonah Lawrence". I had used 3 of his main open-source projects to create a beautiful and elegant portfolio for myself.

1. Readme - Typing - SVG:

- I had used the typing animation for name and taglines
- Font Name: Dancing Script, Cinzel Decorative
- Colour I used: Pastel pink (#E0A5F) & Royal Purple (4B2E83)

2. Shields.io badges:

- I had customized lots of badges for my portfolio.
- Colours I used: Shades of Lavender (E0BBE4, D8B4FE, 4B2E83)

3. Streak-stats:

- I had used streak-stat-demolab.com with custom colours which matches my lavender theme.
- This tool reads my Github contribution using Github API and generates a beautiful SVG card.

Using Johan Lawrence's "Dynamic README" concept, I had created my portfolio easily without learning any code. It is very easy to use, 100% customizable and made my portfolio unique. Anyone can use it and create their profile with ~~own~~ their own themes and ideas.

I had did some changes in the portfolio I had attached.

1. Readme - Typing - SVG - Changed :

- Old one was in Cinzel Decorative font and royal purple.
- Now my typing says "I'm Madhumathi". I changed tagline to show my name in a professional way.

2. Shields.io Badges :

- Old : Randomly arranged badges in different shades.
- New : I grouped and organized into 3 proper categories.
 - ★ Interest
 - ★ Currently learning
 - ★ Technical Skills.

➤ This makes my portfolio look very professional and this I chose shades of lavender which matches my whole theme.

3. Connect with me : New Badges

I had added LinkedIn and Gmail badges with link, so anyone can contact me.

4. Footer Tagline - NEW ADDED :

I had added a quote about learning in Cinzel Decorative font. Which makes my portfolio look elegant.

5. Profile Views Counter :

- It's a small badge that shows how many people visited my profile or repo.
- Tool : komarev.com/ghpvc
